

# LABMASTIS®

Decision-support tool

**Fast, clear guidance**  
between vet visits

Somatic Cell Count (SCC) spikes cause farmers' stress

- **Common occurrence** 20–50% of cows at least once a year
- **Risk perception** Milk quality, Financial penalties, After dry-off
- **Animal welfare** incontrolled
- **Farm organization** disrupted

## THE CHALLENGE

**Detect on the farm the cases where antibiotics are unlikely to work**

Helping avoid misuse of antibiotics.

40% of cases do not justify antibiotic treatment

**why LABMASTIS® ?**

LABMASTIS® is a rapid on-farm decision-support test that helps distinguish:

✓ **Milk containing significant loads of major mastitis pathogens**

✗ **Milk with low or no major mastitis pathogens**

“unlikely to benefit from antibiotics”

# Simple. Fast. On-Farm.

A test that fits naturally into daily farm practices,  
**without slowing down decision-making.**

- ✦ Only **3** minutes of handling
- ✦ Results available between **2** milkings
- ✦ **85 %** of major pathogens identifiable
- ✦ Clear, unambiguous results

A tool **that supports the decision, without ever dictating it.**

\* Final treatment decisions remain under veterinary supervision

## Key benefits **for the farmer**

- € Better control of economic losses and penalties
- 🐮 Improved animal welfare
- 🛡️ Confidence and peace of mind in decision-making
- ✊ Reduces unnecessary antibiotic use

 **LABMASTIS®**

**Data to guide, not replace,  
veterinary judgment**

LABMASTIS® – Colorimetric test on cow's milk, designed and distributed by Vetophage, available in different packaging formats.
